from Exponential Audio in April (iLok 2 or iLok 3 required)

R2 stereo reverb plug-in

R2 is one of Exponential Audio's first and most popular plug-ins. It's been an essential part of countless music mixes as well as films and broadcasts. The plug-in is known as a character reverb that adds a tasty finish to any source material, and is capable of adding warmth and fatness to mixes that might otherwise be sterile. For soloists, it has a savoury and deep tail that adds a high-production gloss to anything.

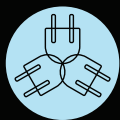

Take Advantage

To take advantage of this offer, simply register your Focusrite product or log in to your account on or before 30th April 2017. Follow the instructions at the top of your account page to enable you to access these great deals. Please be aware that this offer will not be available after 30th April.

Upgrade offers

R2 makes a real difference, showing just how far the art of reverb has advanced, but Focusrite hardware customers can take that even further. When you redeem your R2 license, you'll become eligible for two special discounts:

40% off R2 Surround

R2 Surround is an expanded version of R2, featuring additional control over early reflections and a native channel count of up to 7.1. Exponential Audio's novel 3D Link technology allows you to expand this to as many as 16 channels. R2 Surround has been hard at work in cinema for several years now. If you've been to the movies, you've heard it.

50% off R4

R4 is Exponential Audio's newest reverb, and combines the classic sound of hardware reverberation with an all-modern approach.
