

# INTRODUCING BRAINWORX BX\_CONSOLE FOCUSRITE

Exclusively free for Focusrite Pro Customers

Two of the most revered pieces of recording gear in the history of music production, the Focusrite ISA 110 Equaliser and ISA 130 Dynamics Modules helped to shape the sonic landscape of the 1980s and 90s. They were key components in the original Focusrite Studio Console, their unique specification, exceptional build quality and impressive versatility delivering a beautifully open sound that found favour among audio engineers the world over.

Designed and coded by the DSP geniuses at acclaimed software house Brainworx, the bx\_console Focusrite VST/AU/AAX plug-in for Mac and PC faithfully captures the sound, feel and styling of Focusrite's

original iconic hardware — and it's included for free with ANY Focusrite Pro product (Red, RedNet, or ISA).

Accurately modelling the full signal paths of the ISA 110 and ISA 130, bx\_console Focusrite brings all the analogue character and colouration of the Focusrite Studio Console to your DAW-based productions. Offering four bands of parametric and shelving EQ, high- and low-pass filters, compression/limiting, gating/expansion and de-essing, it's as powerful a sound-shaping tool today as it ever was — indeed, it improves on the capabilities of the original with modifications including continuously variable THD and Gain controls. And

with Brainworx's Tolerance Modelling Technology providing 72 selectable modelled circuits, you can even recreate the subtle timbral variations between channels that you'd get with the real console.

With bx\_console Focusrite retailing separately for \$349, its inclusion for free with all Red, RedNet, or ISA solutions is a huge deal. To download the plug-in, simply register your new product online, then log into your Customer Portal page, where you'll see bx\_console Focusrite listed in the My Software page among your registered products.
